

SHINNY STICKS

SHINNY is a pick-up or back yard game of lacrosse. The rules & player configuration vary depending on who's playing. Goals can be anything from a trash can to a 1' x 6' netted goal. Though you often see Shinny played with full size LAX shafts, using a mini stick (sometimes called fiddle stick) is an easy & "fun" alternative that everyone (young & old) can enjoy whether you play lacrosse or not.

SHINNY STICKS are also a terrific way to introduce young kids to lacrosse. Many coaches & parents have told us that they use mini sticks as an aid to improve a young players hand & eye coordination along with their stick work development.

BLACKFEET SHINNY STICKS are mini shafts made from wood that come with our trade-mark butt ends set into the shaft.

* We also offer by hand engraving on the body of the shaft. Getting a players name or number engraved on the shaft make great personalized gifts.

Natural Brown Pita Pocket Mini

Lunar Eclipse Pita Pocket Mini

Horse Blanket Pita Pocket Mini

Minis also offered with a Mesh Pocket

LACROSSE STICKS

WARPATH! NFL Famed Jim Brown played Lacrosse at Syracuse (was of coarse superb) with a stick the size of a mini. (Rules have changed this year for 12 and under – shorter sticks! Cut 'em down or better still use the best – **H TAPER PINE 27"** short!

Attack Ash! Since we developed our selection process there have been *zero* incidents of breakage in the Ash Attack shaft. Choose from Featherweight, Medium and Stout (heavy) in 3 Stain Colors & Natural. Also available as H Taper our semi-custom tactically modified profile for handgrip & balance.

D Pole! Provides a player game not possible with metal or composite. Super light alloy d poles break. Our 3 weight classes outperform all other choice options at half the money. Featherweight, Medium & Stout Ash poles selected for superb strength and flexibility are serious equipment for players of all ages.

Girls & Women's Handles! Made of the same highly selected Pine Wood for exceptional lightness with flexibility & strength. Stick profile resembles current composite shafts for optimal grip. Wood won't chill in cold weather, comes in one additional Stain Color (4 total), 31 1/4" long meets new regulation allowable length.

SHAFT PROCESS

From Rick: When I started making lacrosse shafts my approach was expressly not to become informed on what anyone or everyone else was doing in the production of shafts. I allowed my in-depth knowledge of wood, my passion for wood-craft & my love for the game act as my guide. Through my knowledge of wood, Ash is without question the most playable wood when all aspects of stick work & needed durability from attack, to defense, to mid-field are taken into account. That knowledge coupled with my desire to deliver to each and every player the highest quality wood shaft, dictates that I stay heavily involved in the entire process from source selection to finished product. My wood source selection comes from areas within Appalachia where all Ash sport woods originate. This is followed by my choice of processing mill & a post mill ash inspection & selection. Once the ash arrives in my shop, each shaft is hand-crafted with immense care at all stages.

Key Chain & Zipper Pulls!

Lacrosse Stick Picture Frame!

Engraved Mini Appreciation Shaft!

Engraved Full Size Appreciation Shaft!

Blackfeet Lacrosse

All lacrosse equipment serves a unique & functional purpose. Whether it's the protective equipment, that prevents injury for the player, or the head & pocket along with the stick that can increase speed & accuracy. But aside from it's functional purpose, the stick stands alone in that it becomes more to the player than just a piece of lacrosse equipment. The stick becomes an extension of the player & to a degree characterizes the uniqueness & personality of the player themselves. It is our belief that no other shaft on the market Fosters the essence of this player & stick relationship like Blackfeet Wood Shafts.

We know that no one player is identical in talent or heart to another player. Similarly, none of our shafts are identical to the one before it or the one after it. Wood is a million cells per cubic inch, each of these contains water under pressure, a tension & structure of immense complexity. In some respects our sticks still live. Additionally, we pride ourselves on the care & craftsmanship that goes into each of our shafts. That is why we back each one with a six month replacement warranty.
